

## Risk Mitigation

There are certain risks that you need to be aware of in the preparation of your visit, below is a mention of a few to assist you in your travel planning.

- Traffic, South Africa has a high incidence of traffic accidents, so bigger car and driving slowly minimizes the risk.
- Malaria, the Kruger Park and Sangasava is in the region where Malaria occurs. The risk varies over the seasons, but is always there. Main risk mitigation is prophylactic malaria medication, sprays against mosquitos and wear long sleeve shorts and trousers at dawn and dusk. Consult with your doctor.
- Crime is problem in South Africa. Mainly in urban areas. Less of a problem once you are inside the game reserve.
- Wild animals, are just that. Stay in cars when in the open field, and take extra caution at the river lapa, no electric fence that protects it. Do not spend time there after dark.
- The sun is intense, use sun lotion and stay in the shade.
- There is a hospital in Tzaneen, a 2 hour drive from Sangasava.

The Sangasava nature reserve is part of the Greater Kruger Park wildlife protection area. As such, we are contractually bound to follow all the rules to protect the nature and wildlife. The golden rule is that we must not interfere with the nature or the wildlife.

There are also local rules such as keeping noise to a minimum, particularly after dark. Also use of torches for spotting animals are not allowed after sunset.

The maps inside the game reserve are some marked 'game drives'. However, we only have the right to use the direct route from the Parsons Gate to the lodge.

No person is allowed to enter the Sangasava farm when you visit so if you see any person on the property, please report it to the local staff.

Living in the bush, we are all dependent on each other, so the relationships with nearby farms are crucial. Your assistance to maintain our good relationships are most appreciated.
